

Ri-Jet M100 Hi-Grip

PRODUCT DESCRIPTION / BENEFITS

Ri-Jet M100 Hi-Grip series is a self-adhesive film for Large Format Digital printing, designed for short-term application on flat apolar surfaces.

The monomeric vinyl, UV stabilised, has an external colour stability up to 3 years, specially developed to be printed with solvent, eco-solvent, latex, and UV inkjet printing presses.

The 100 µm film thickness grants good ink absorption without making the face film too soft, which allows easier application. The solvent-based Hi-Grip adhesive provides a good adhesion on low surface energy substrates such as PE and PP.

The 135 g/m² coated kraft paper ensures good planarity and printing results.

All products are REACH & RoHS compliant.

TYPICAL USE

- Short term outdoor/indoor advertising on apolar substrates, such as motocross tanks, quad bikes, Go Karts, etc ...
- Temporary point of sale advertising.

CONSTRUCTION

- **Face film:** 100 µm calendered monomeric film
- **Adhesive:** high tack clear solvent-based acrylic
- **Release liner:** clay coated kraft paper 135 g/m²

Products:

White Gloss finish: Code 09668 - **Ri-Jet M100 White Gloss Hi-Grip**

CONVERTING METHOD

Specially developed to be printed with solvent, eco-solvent, latex, and UV inkjet printing presses. To achieve the best possible print quality, make sure that the correct ICC profiles or printer settings are used. The printed media should dry minimum 24h prior to lamination.

We suggest a lamination with Ri-Lam M70 Clear Gloss, Matt or Satin to protect the printed image from UV fading and mechanical abrasion.

Not suitable for sheeting (adhesive bleeding).

APPLICATION METHOD / INSTRUCTIONS FOR USE

Dry and wet application method on clean and degreased substrates.

Application temperature above 10°C.

The Hi-Grip adhesive has a low cohesion. Therefore, the film will tend to shrink.

Ri-Jet M100 Hi-Grip series is not suitable to big surface coverage needing multiple overlapped width. We recommend leaving 0.5 cm unprinted area around the printed poster edge.

EXPECTED DURABILITY

The expected vertical outdoor durability in Central Europe (zone 1) is 3 years.

This information is based on real file experience and artificial aging according to ISO 4892-2.

Note: Exposure to severe temperature and ultra-violet light will cause a quicker deterioration. This applies also to polluted area, high altitude, horizontal applications, and south-facing exposure in north hemisphere.

SHELF LIFE

Shelf life is 2 years, when stored at 23 °C and 50 % relative humidity conditions.

Higher temperatures and/or humidity levels will reduce product shelf life.

NB: Printing results start to deteriorate after 12 months storage.

Ri-Jet M100 Hi-Grip

**PHYSICO-CHEMICAL
PROPERTIES / TYPICAL
VALUES**

Face thickness, without adhesive	100 µm	ISO 534-80
Face thickness, with adhesive	135 µm	ISO 534-80
Tensile strength (machine direction)	> 25 N/cm	ISO 527
Elongation at break (machine direction)	>150%	ISO 527
Fire resistance on aluminium	Self-extinguishing	ISO 3795:1989
Dimensional stability (1 week @70 °C on glass)	2.0 mm	FTM 14
Initial adhesion on glass (20 minutes)	13 N/25mm	FTM 1
Adhesion on glass (24 hours)	20 N/25mm	FTM 1
Final adhesion on glass (1 week)	22 N/25mm	FTM 1
Adhesion on PE (24 hours)	10 N/25mm	FTM 1
Minimum application temperature	+10 °C	
Service temperature	From -40 °C to +90 °C	
One side siliconized clay coated paper liner	135 g/m ²	ISO 536
